

Download Version

Precautionary Matrix for Synthetic Nanomaterials

Instructions for installation under Windows

- Download the ZIP archive **nanoraster.zip**.
- Find the downloaded ZIP folder and extract it: If the folder is of the kind “compressed ZIP folder”, click with the right mouse key on the folder and choose “extract all...”. Select the destination and click on “extract”. The ZIP folder is then no longer needed.
- The **nanoraster** folder contains all required components. Please do not delete or rename any of the data.
- Start the **nanoraster** application in the **nanoraster** folder with a double click. Confirm the security warning by clicking on “run”.
- Remark: if the starting page appears repeatedly with a red indication, and it becomes impossible to switch to the input mask, please ensure that the **nanoraster** folder is not write-protected and is not on a write-protected medium.

Instructions for installation under MacOS X

- Download the disc image **Nanoraster.dmg**.
- Activate the image by double clicking. Drag the contained **Nanoraster** application to the desired location.
- If a security message prevents the **Nanoraster** application from starting, open the application the first time with the context menu: Click with the right mouse button on the application, choose “open”, then again “open”. The application can then be normally launched with a double click.
- The application launches the required web server and opens the start page in the preferred web browser. **The application then exits immediately**. The web server stays available in the background until the next time the user logs off the computer.
- Remark: if the starting page appears repeatedly with a red indication, and it becomes impossible to switch to the input mask, please ensure that the **Nanoraster** application is not write-protected and is not on a write-protected medium.
