Test case #13476 CHXDS-I.b_DOC_CONS_RAD-69

Test Summary

Keyword :	CHXDS-I.b_DOC_CONS_RAD-69	**Type :**	conformity assessment
Name :	CHXDS-I.b_DOC_CONS_RAD-69	**Peer Type :**	NO_PEER_TEST
Version :	1.0	**Status :**	ready
Author :	aeschlimann	**Verified by :**	aeschlimann
Date of last	2019-09-19 15:10:32.646031 by aeschlimann		

Short Description : This test is to verify the SUT capacity to request an image document through a RAD-69 transaction with a XDS-I document source simulator.

Test Description

Special Instructions

In this test case, we will perform a RAD-69 transaction initiated by the SUT to a simulator acting as a XDS-I Document Source.

To perform this test, you'll need the DICOM KOS (manifest.dcm) available at : https://ehealthsuisse.ihe-europe.net/test_data/XDS-I_Documents/. (right click > Save link As..)

Patient ID : **761337610411265222^^^&2.16.756.5.30.1.127.3.10.3&ISO**

Repository Unique ID : **1.1.4567332.10.8**

Endpoint [RAD-69] : **https://ehealthsuisse.ihe-europe.net:10443/xdstools7/sim/epr-testing__imaging_document_source/ids/ret.ids**

RAD-69 must be grouped with an ITI-40. Before each request you must :

1. Use the Identity Provider Simulator to do an **Authenticate User** transaction (Use the HCP aandrews)
2. Then do an **Get X-User Assertion** to the Assertion Provider Simulator (**https://ehealthsuisse.ihe-europe.net:10443/STS?wsdl**)
3. Use the SAML Assertion in your RAD-69 request
4. This part is checked in the test case XUA_X-SERVICE-USER_ITI-40. You must create a test instance of this and paste the link in the step 5.

Important : TLS is mandatory to every request in the XDS profile, as a consequence every endpoint have to use HTTPS.

Description

In order to retrieve the 3 images stored in the simulator repository, exctract the following data from each DICOM KOS :

- RetrieveLocation UID (0040,e011)

- Document UID (0008,0018)

- Transfer Syntax UID (0002,0010)

- Study Instance UID (0020,000d)

- Serie Instance UID (0020,000e)

Using the given metadata, perform the following transactions retrieve the corresponding image document.

Take note of the time at which you initiated your transaction, it'll be helpful for the next step.

- Once your request has been executed, you'll need to recover its log from XDSTools :

- Go to XDSTools7 homepage
- At the top of the page, set the Environment to **ehealthsuisse** and the Test Session to **epr-testing** from the drop-down lists
- At the left side of the page, click on the "**New Simulator Logs**" option (in the "**Toolkit**" section)
- Select the simulator that participated in your transaction (here it's **epr-testing__imaging_document_source**)
- In the **Message** menu, pick the logs corresponding to your transaction using your IP and transaction time
- From the **Request Body** tab, copy the Enveloppe of your request in an xml file

- Now to validate your request with the validation tool EVSClient :

- In EVSClient, choose on the menu **EPR > XD* Metadata > Validate**
- Upload your XML message. Then, in Model Based Validation select: **CH XDS-I.b RAD-69 Retrieve Imaging Document Set - request** to validate your request
- Copy the permanent link to your validation in the corresponding test step

Upload a proof that your system has correctly retrieved the document.

Evaluation

The validations on EVS Client must return "**Passed**".

You must show a proof that your system received the correct document (a screenshot).

Test case #13475 CHXDS-I.b_DOC_SRC_RAD-68

Test Summary

Keyword :	CHXDS-I.b_DOC_SRC_RAD-68	**Type :**	conformity assessment
Name :	CHXDS-I.b_DOC_SRC_RAD-68	**Peer Type :**	NO_PEER_TEST
Version :	1.0	**Status :**	ready
Author :	aeschlimann	**Verified by :**	aeschlimann
Date of last	2019-09-12 18:12:31.976514 by aeschlimann		

Short Description : This test is to verify the SUT capacity to register a DICOM KOS through a RAD-68 transaction with a XDS document repository.

Test Description

h3.cjk { font-family: "Noto Sans CJK SC Regular"; }h3.ctl { font-family: "Lohit Devanagari"; }h2.cjk { font-family: "Noto Sans CJK SC Regular"; }h2.ctl { font-family: "Lohit Devanagari"; }p { margin-bottom: 0.25cm; line-height: 115%; }a:link { } Special Instructions

In this case we will test the Provide and Register Imaging Document Set (RAD-68) transaction with a simulator acting as both the Document Repository and Document Registry.

To perform this test, you'll need to download the files "image1.dcm", "image2.dcm", and "image3.dcm" from : https://ehealthsuisse.ihe-europe.net/test_data/XDS-I_Documents/

The data you'll use for the transactions are :
patient ID: **761337610411265222^^^&2.16.756.5.30.1.127.3.10.3&ISO**

Repository Unique ID : **1.1.4567332.1.70**

Requests endpoint : **https://ehealthsuisse.ihe-europe.net:10443/xdstools7/sim/epr-testing__for_doc_source_testing/rep/prb**

RAD-68 must be grouped with an ITI-40. Before each request you must :

1. Use the Identity Provider Simulator to do an **Authenticate User** transaction (Use the HCP aandrews)
2. Then do an **Get X-User Assertion** to the Assertion Provider Simulator (**https://ehealthsuisse.ihe-europe.net:10443/STS?wsdl**)
3. Use the SAML Assertion in your RAD-68 request
4. This part is checked in the test case XUA_X-SERVICE-USER_ITI-40. You must create a test instance of this and paste the link in the step 5.

Important : TLS is mandatory to every request in the XDS profile, as a consequence every endpoint have to use HTTPS.

Description

1 - Extract the KOS of each image in xml format (name each KOS by changing the .dcm extension of the image name to .xml).

The following metadata are required in the RAD-68 request to register the KOS and can be find inside of it :

- Creation Time (formed using both (0008,0012) and (0008,0013)

- Service Start Time (0008,0020)

- Service Stop Time (0008,0030)

- Type Code (0008,1032)

- Document Unique ID (0008,0018)

The rest of the metadata used for the transaction is non-important, as long as they respect the IHE and swiss XDS specifications.

2 - Using the metadata obtained, send the file "image1.xml" in a first request.

3 - Then send the two files "image2.dcm" and "image3.xml" in a second request.

Take note of the time at which you initiated your transaction, it'll be helpful for the next step.

- Once your requests has been executed, you'll need to recover their logs from XDSTools :

- Go to XDSTools7 homepage
- At the top of the page, set the Environment to **ehealthsuisse** and the Test Session to **epr-testing** from the drop-down lists
- At the left side of the page, click on the "**New Simulator Logs**" option (in the "**Toolkit**" section)
- Select the simulator that participated in your transaction (here it's **epr-testing__for_doc_source_testing**)

- In the **Message** menu, pick the logs corresponding to your transaction using your IP and transaction time
- From the **Request Body** tab, copy the Enveloppe of your request in an xml file

- Now to validate all your requests with the validation tool EVSClient :

- In EVSClient, choose on the menu **EPR > XD* Metadata > Validate**
- Upload your XML message. Then, in Model Based Validation select: **CH XDS-I.b RAD-68 PnR Imaging Document Set-b - request** to validate your request
- Copy the permanent link to your validation in the corresponding test step

For each steps, upload a proof that your system has correctly retrieved the documents.

Evaluation

The metadata used for the RAD-68 request are those found in the corresponding KOS (show both the KOS and your request to the monitor).

The validation in both EVSClient and GWT must return **Passed**.

The response of to your request must be **Success** (provide a screenshot of your system).

Test Participants

Role in test : EPR_XDS-I.b_DOC_REPOSITORY_SIMU (Tool) **Option :** R **Nb of instances :** 1

Test case #13477 CHXDS-I.b_DOC_SRC_RAD-69

Test Summary

Keyword :	CHXDS-I.b_DOC_SRC_RAD-69	**Type :**	conformity assessment
Name :	CHXDS-I.b_DOC_SRC_RAD-69	**Peer Type :**	NO_PEER_TEST
Version :	1.0	**Status :**	ready
Author :	aeschlimann	**Verified by :**	aberge
Date of last	2019-09-12 18:15:38.205565 by aeschlimann		

Short Description : This test is to verify the SUT capacity to provide an image document requested through a RAD-69 transaction initiated by a XDS-I Document Consumer simulator.

Test Description

Special Instructions

In this test case, we will perform a RAD-69 transaction initiated by a Document Consumer simulator to the SUT acting as a XDS-I Document Source.

To perform this test, you'll need to register on your Document Source Repository the DICOM image files (image1.dcm, image2.dcm, image3.dcm) available at : https://ehealthsuisse.ihe-europe.net/test_data/XDS-I_Documents/

Be cautious to register the files using the proper metadata, especially the following :

- Patient ID : **761337610411265222^^^&2.16.756.5.30.1.127.3.10.3&ISO**

- Document UID (0008,0018)

- Transfer Syntax UID (0002,0010)

- Study Instance UID (0020,000d)

- Serie Instance UID (0020,000e)

(you'll be able to find these in the corresponding DICOM KOS of each image file)

The Imaging Document Source actor is expected to act as a X-Service provider. This test will also be used to assess this role for RAD-69 transaction. In order to do so, you'll need to follow the instructions from this test case :

XUA_X-SERVICE-PROV_ITI-40

Important : TLS is mandatory to every request in the XDS profile, as a consequence every endpoint have to use HTTPS.

Description

Before anything, configure your system to be able to test its role as X-Service Provider, X-Service User and ADR Consumer.

The requests will be sent to your SUT from Gazelle Webservice Tester. To execute this test:

1. Access Gazelle Webservice Tester and log into the application;
2. Go to menu "Run";
3. Select the test project name **EPR XDS-I Document Source** from the drop-down list;
4. Select test suite **[RAD-69] Retrieve_Imaging_Document_Set TestSuite** by ticking the checkbox in front of its name;
5. Enter the URL of your system under test endpoint (shall be a secured endpoint)
6. Click on "Run" button
7. Wait for the script to complete its execution;
8. When the script stops, copy the permanent link of the execution to the test step in Gazelle Test Management

A **Passed** result means the documents have been properly recovered by the simulator.

The conformance of the responses sent back by your system shall be assessed. In Gazelle Webservice Tester, validate the message in EVSClient. To do so:

1. Click on the play icon next to the response type;
2. You have been redirected to EVSClient, select validator: XDS and Extension **CH** and hit the "Go" button;
3. Once the page of the validator opens, select the appropriate entry in the drop-down list and click on "Validate";
4. When the validation report shows up, a pop-up raises, click on "OK";

Evaluation

The monitor will check that you copied the link to this test instance to the corresponding test step of the test case XUA_X-SERVICE-PROV_ITI-40.

The validations on EVS Client must return **Passed.**

The status of each query must have a status "**Passed**" in GWT.
