Test case #13719 CH-

Test Summary

Keyword : CH-VACD_Aggregated_Doc_add_dose **Type :** conformity assessment
Name : CH- **Peer Type :** NO_PEER_TEST
Version : 1.0 **Status :** ready
Author : Imichel **Verified by :** **Not verified**
Date of last 2023-11-14 14:24:10.660612 by vhofman

Short Description : Check if the aggregated document is well-formed and in accordance with the specifications and use case.

Test Description

Short Description

The purpose of this test case is to validate the aggregation of several documents in ONE result document.
The Test Case is available at http://fhir.ch/ja/ch-vacd/TC_A02.html.
You have to aggregate the documents for this use case and validate your output documents.

DO NOT USE Result Documents, they are given as informative sample.

Goal

The Content Creator is able to correlate information issued from several bundles.

Tested Components

Content Creator

Prerequisite

1. Under this [link](#) you will find a list of available aggregated validators.
2. Source documents for the uses case have to be downloaded.

Description

The Content Creator has to demonstrate that it can aggregate Immunization Administration documents in one result document.

Validate first that the aggregate output conforms to the CH VACD specification

If the first validation is successful, use EVS Client to compare your aggregation to the reference aggregation provided by the specification.

Note : You can use either JSON or XML representations so please pay attention to use the right validator in EVS Client.

Evidence

Each output document has to be validated two times with [EVS Client](#) :

1. In the menu [EPR/CH:VACD/Validate](#), choose **CH VACD Vaccination Record Document** to obtain the proof that your document is in accordance with the Implementation Guide.
2. In the menu [EPR/CH:VACD Aggr Doc/Validate](#), choose the **right validator for the use case** `fhir[JSON/XML]_vacd_A02_Usecase` to obtain the proof that the aggregation has been correctly performed.

Evaluation

The Monitor will check that the validations for this test instance have no errors and the representation of the document is consistent with the use case.

Test Participants

Role in test : CH-VACD_CONTENT_CREATOR (SUT)

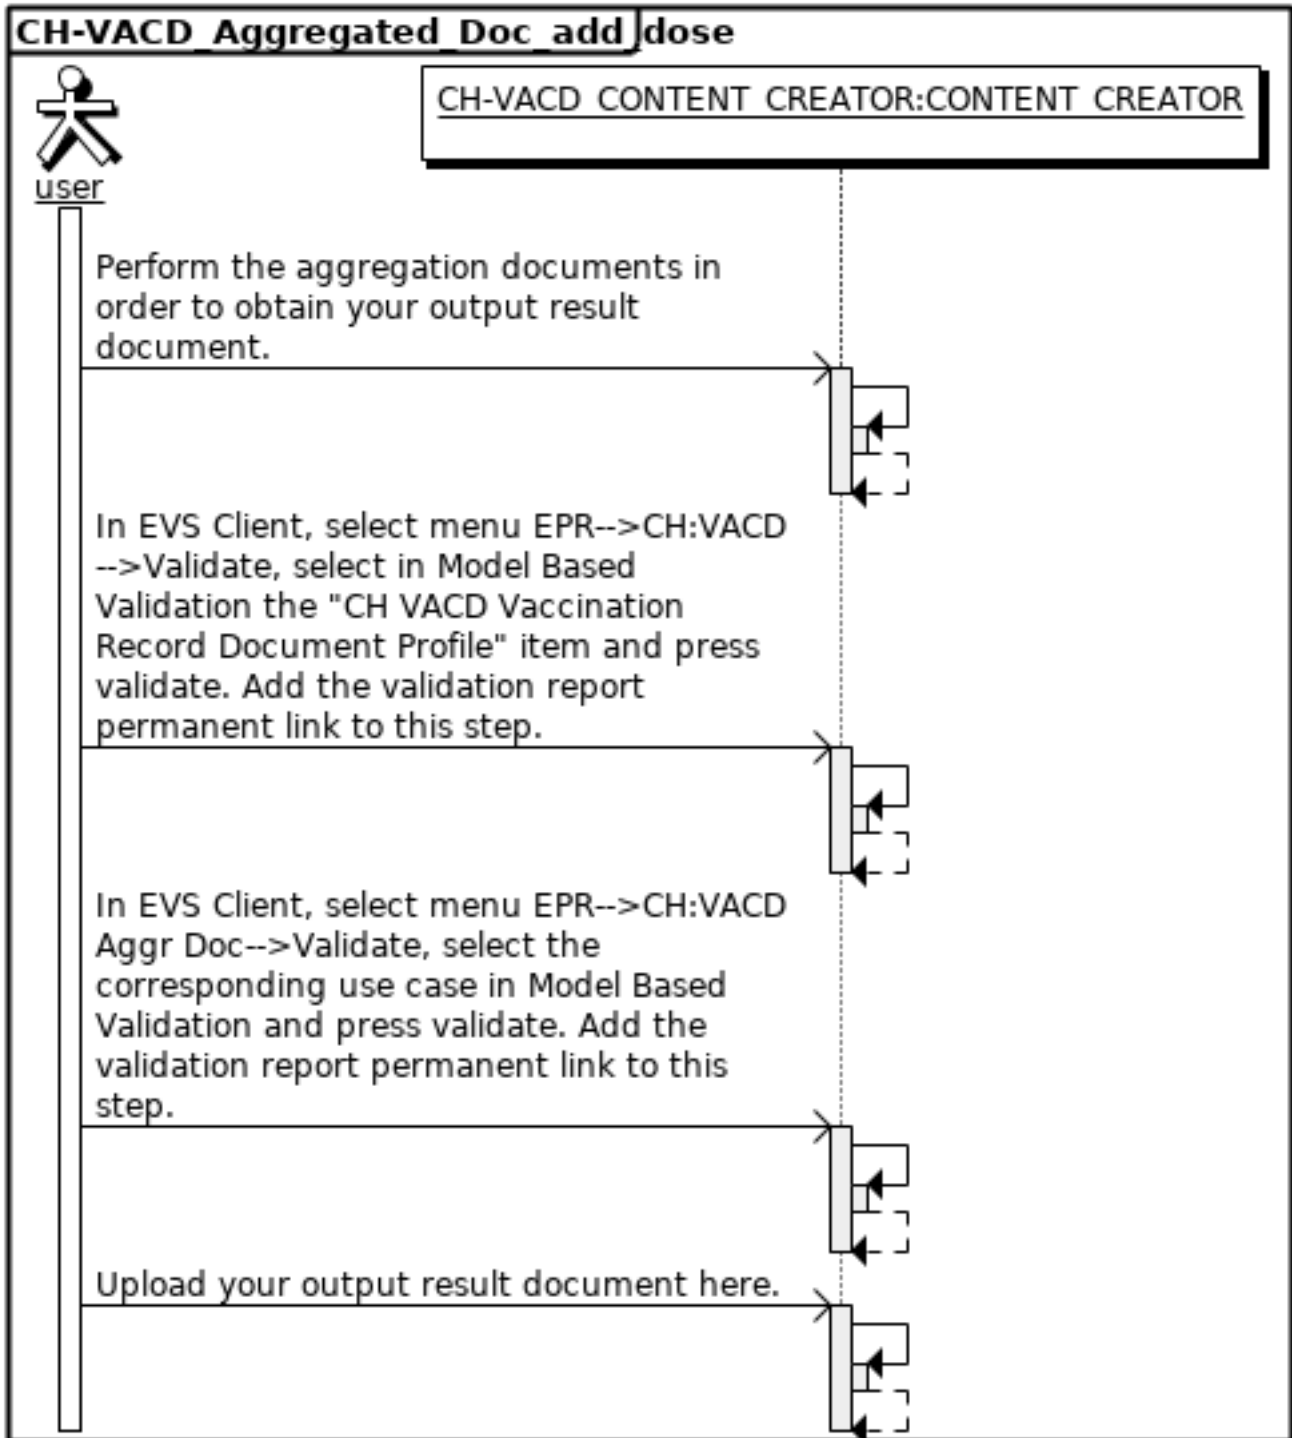

Option : R

Nb of instances : 1

Actor	Profile	Option
CONTENT_CREATOR	CH-VACD	NONE

Test Steps							
Index	Initiator	Responder	Transaction	Message Type	Secured ?	Option	Description
10	CH-VACD_CO NTENT_C REATOR	CH-VACD_CON TENT_CREA TOR		None	No	Required	Perform the aggregation documents in order to obtain your output result document.
20	CH-VACD_CO NTENT_C REATOR	CH-VACD_CON TENT_CREA TOR		None	No	Required	In EVS Client, select menu EPR-->CH:VACD -->Validate, select in Model Based Validation the "CH VACD Vaccination Record Document Profile" item and press validate. Add the validation report permanent link to this step.
30	CH-VACD_CO NTENT_C REATOR	CH-VACD_CON TENT_CREA TOR		None	No	Required	In EVS Client, select menu EPR-->CH:VACD Aggr Doc-->Validate, select the corresponding use case in Model Based Validation and press validate. Add the validation report permanent link to this step.
40	CH-VACD_CO NTENT_C REATOR	CH-VACD_CON TENT_CREA TOR		None	No	Required	Upload your output result document here.

Short Description : Check if the aggregated document is well-formed and in accordance with the specifications and use case.

Test Description

Short Description

The purpose of this test case is to validate the aggregation of several documents in ONE result document.
 The Test Case is available at http://fhir.ch/ig/ch-vacd/TC_B01.html.
 You have to aggregate the documents for this use case and validate your two output documents.

DO NOT USE Result Documents, they are given as informative sample.

Goal
 The Content Creator is able to correlate information issued from several bundles.

Tested Components
 Content Creator

Prerequisite

- Under this [link](#) you will find a list of available aggregated validators.
- Source documents for the uses case have to be downloaded.

Description
 The Content Creator has to demonstrate that it can aggregate Immunization Administration documents in one result document.

Validate first that the aggregate output conforms to the CH VACD specification
 If the first validation is successful, use EVS Client to compare your aggregation to the reference aggregation provided by the specification.

Note : You can use either JSON or XML representations so please pay attention to use the right validator in EVS Client.

Evidence
 Each output document has to be validated two times with [EVS Client](#) :

- In the menu [EPR/ CH:VACD/ Validate](#), choose **CH VACD Vaccination Record Document** to obtain the proof that your document is in accordance with the Implementation Guide.
- In the menu [EPR/ CH:VACD Aggr Doc/ Validate](#), choose the **right validator for the use case** fhir[JSON/XML]_vacd_B01_Usecase to obtain the proof that the aggregation has been correctly performed.

Evaluation
 The Monitor will check that the validations for this test instance have no errors and the representation of the document is consistent with the use case.

Short Description : Create an Immunization Administration document.

Test Description

Short Description

This test case is used to verify that the Content Creator can create a [CH-VACD](#) Immunization Administration document

Goal

The Content Creator is able to generate and validate a [Immunization Administration document](#).

The Immunization Administration document shall contain the structured immunization according to the Use Case 2 ([de](#), [fr](#))

Tested Components

Content Creator

Prerequisite

-

Test Data

A sample can be found at this address ([en](#)) .

Description

The Content Creator has to demonstrate that it can create a valid Immunization Administration document from its system.

Evidence

Immunization Administration document validated against validator generated from the Implementation Guide in [EVS Client](#) and checked that the representation is consistent with the structured information in the document.

Evaluation

The Monitor will check that the validation had no errors and the representation of the document is consistent with the structured document.

Test Participants

Role in test : CH-VACD_CONTENT_CREATOR (SUT)

Option : R

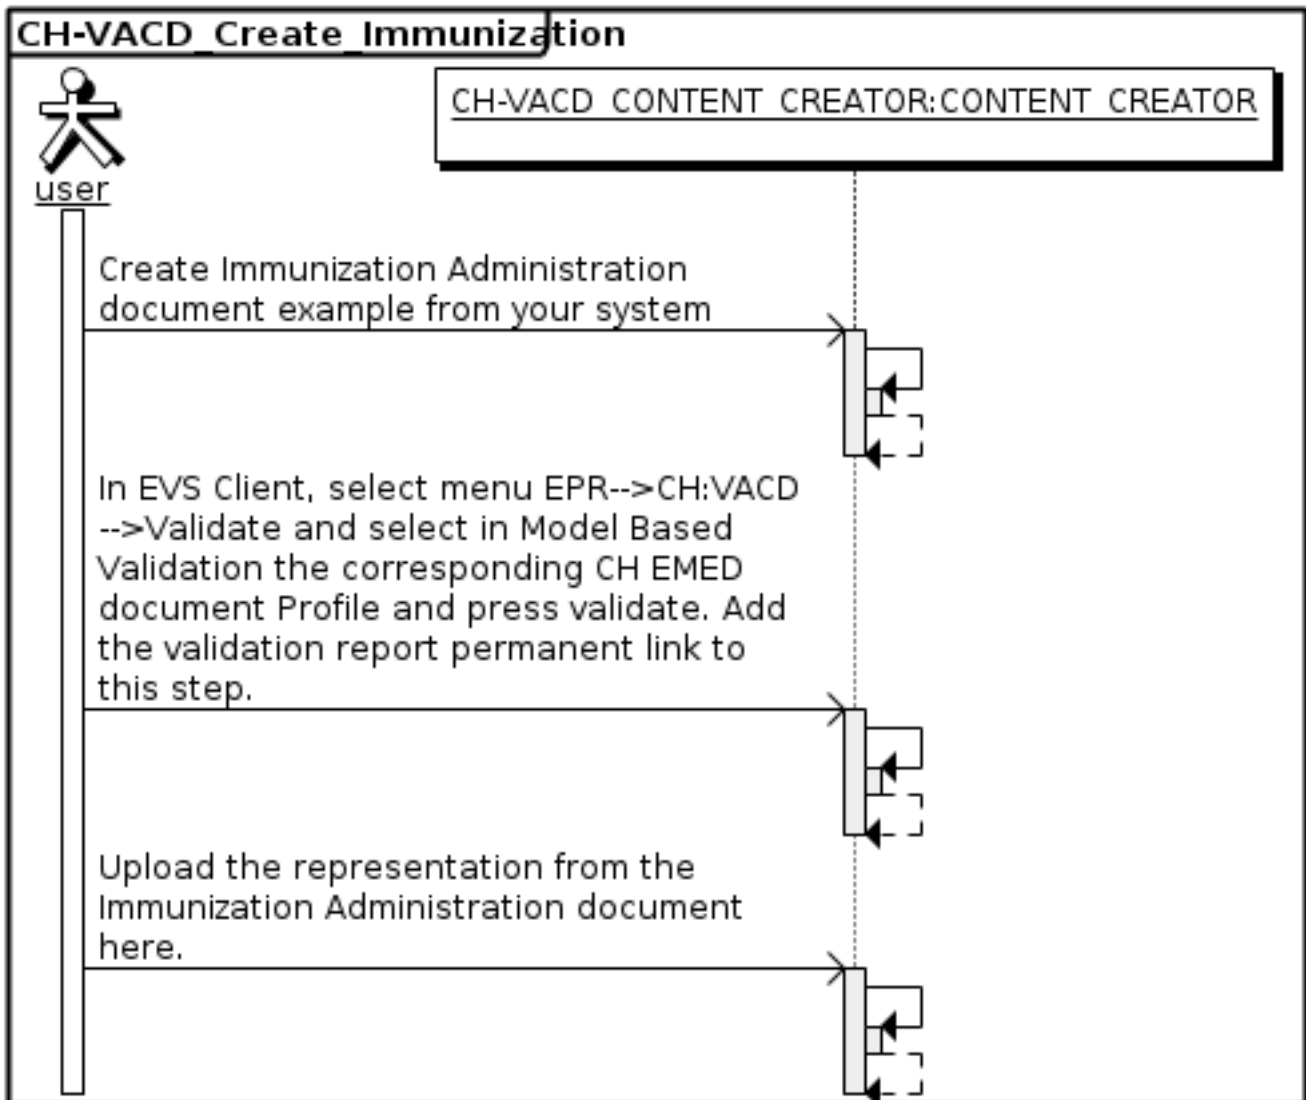

Nb of instances : 1

Actor	Profile	Option
CONTENT_CREATOR	CH-VACD	NONE

Test Steps

Index	Initiator	Responder	Transaction	Message Type	Secured ?	Option	Description
10	CH-VACD_CONTENT_CREATOR	CH-VACD_CONTENT_CREATOR		None	No	Required	Create Immunization Administration document example from your system
20	CH-VACD_CONTENT_CREATOR	CH-VACD_CONTENT_CREATOR		None	No	Required	In EVS Client, select menu EPR-->CH:VACD -->Validate and select in Model Based Validation the corresponding CH EMED document Profile and press validate. Add the validation report permanent link to this step.
30	CH-VACD_CONTENT_CREATOR	CH-VACD_CONTENT_CREATOR		None	No	Required	Upload the representation from the Immunization Administration document here.

Short Description : Import Immunization Administration document data

Test Description

Short Description

This test case is used to verify that the Content Consumer can import discrete data elements of [CH-VACD documents](#) Immunization Administration document

Goal

The Content Consumer is able to extract the data elements.

Tested Components

Content Consumer

Prerequisite

CH-VACD document, see Test Data below.

Test Data

A samples can be found at this address ([en](#)) .

Description

The Content Consumer has to demonstrate that it can extract data elements.

Optionally, the Content Consumer can show the extract data in a document by using a stylesheet.

Evidence

Either displaying the data or showing logging information which data elements have been extracted, optionally display the data with the use of a stylesheet.

Evaluation

The Monitor will check that the extracted data elements from the CH-VACD document are correct.

Test Participants

Role in test : CH-VACD_CONTENT_CONSUMER (SUT) **Option :** R **Nb of instances :** 1

Actor	Profile	Option
CONTENT_CONSUMER	CH-VACD	NONE

Test Steps

Index	Initiator	Responder	Transaction	Message Type	Secured ?	Option	Description
